

ObjectStart LLC

Object Technology/Java Training Offerings

Revised on January 4, 2005

ObjectStart LLC is a technology training/mentorship firm dedicated to educating IT professionals and their knowledge of how to structure a J2EE application from the ground up to make the most of Java's object-oriented nature. The end result is overly complex, "brittle" J2EE applications that are difficult, and hence costly, to maintain and to extend.

- ***Deploying Java Objects (DJO)***: a four day, lecture/lab format course designed to build upon the subject matter of the ***BJO*** course. This course provides instruction on how to use core J2EE component technologies (servlets, JSPs, and JDBC) to build thin-client web applications in Java, as well as how to use the Java Swing API to build classic desktop client-server applications.
- ***“Demystifying” Java, Objects, and J2EE***: a half-day lecture-only seminar designed to provide

Pricing

- Assignments normally performed by students as in-class exercises are instead assigned as ***homework assignments***
